

In this interpretation, I notice some skills to improve upon. I noticed specifically that my affect does not match the deaf consumers' affect. I noticed that there were a couple times I started off my sentences with a filler word. In this interpretation, I also noticed I had some disfluent pausing. One way to not have disfluent pausing would be to extend my processing time. This is one of my goals that I am planning to work on during practicum II. This interpretation can also be improved upon by using some higher register word choices. I want to work towards voicing more complex sentences in my interpretations.
