

Based on my work samples above I have had some areas of growth during my time in both practicum one and two. I see an improvement in my recent sample due to the fact that I used more facial expressions in this interpretation. In my practicum two sample I did not have prominent facial expressions during my interpretation. By adding facial expressions to my interpretation, the message becomes more clear. In this interpretation I also added mouthing the English word while signing the ASL sign. For example, the source had the phrase 'visually impaired'. I used the proper ASL sign and mouthed the phrase that was said in the source. One thing that I notice I can improve upon is my sign articulation. At some points in this interpretation I do not think my articulation was clear. I am looking forward to growing more as I become an interpreter.
