

Based on both of my work samples above I had some areas that had grown during my first practicum. I had improved in using my use of space. In the first sample, my use of space was not clear. In my second sample, you can see that I set things up in space and referred back to them when needed. For example, in my second sample I set up the study in space then referred back when discussing the results. Although, one thing I need to keep working on are my omissions. In my first sample, I had omitted some key ideas. In my second sample, I had omitted pronouns. Use of using pronouns correctly is one my goals for practicum II. Overall, my use of space has improved from practicum I but there is still room for more improvement during practicum II.
